### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: In combination with all the limitations recited in the independent claim, all the prior arts do not show a DC Bus comprising first and a second conductive elements each having a first end portion forming an electrical connection with a substrate, a second end portion, an intermediate portion situated between the first and second end portions, and a compliant portion deformable between a compress position and decompressed position. When the compliant portion of the first conductive element is in the compressed position, the first end portion of the first conductive element is biased into physical engagement with the substrate to form an electrical connection with a first contact on the substrate and the second end portion of the first conductive element is unbiased and electrically couplable to form a non-pressure engagement electrical connection with a first conductive terminal. The compliant portion of the second conductive element has the same function as the compliant portion of the first conductive element except the compliant portion of the second conductive element forms electrical connection with a second contact of the substrate and a second conductive terminal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
